

6/28/2018 - Cooking with CQL: or How to Incorporate CQL into HQMF for eQMs Qs&As

Measure Representation

**Q. “Most or Moderately Effective Contraception Provided” Contraception
Return Contraception.code**

This will return different types of contraceptives including counseling. Do they need to be listed independently or can a definition be used in the supplemental element?

A. The supplemental data element definition can just return the code, even though that will, in general, return multiple different types of contraceptives. For each actual instance, the specific code in the reporting system will be returned. In a summary report, these would be aggregated by code. In an individual report, the data for this individual would be returned.
